# The Perfect Weekend

Elevator pitch

A perfect getaway requires a lot of planning and researching, which can be overwhelming.

Whether you are looking for an adventure-packed trip or a tour that's full of cuisine and entertainment, we've got you covered.

Say goodbye to endless searches, and hello to stress-free travel and user-friendly application with The Perfect Weekend.

Concept

Description

The Perfect Weekend is an application that gives users the ability to find restaurants, activities and points of interests in a desired location to help plan the perfect getaway.

Motivation for development?

Since we all love a little getaway from time to time, we want to create an application that allow us to find food and activities in the area we want go and able to find images and informations about those places to help plan our trips.

User Stories

|	
When user provides the city that they want to visit in the search bar Then user is presented with 3 days weather forecast for the location, along with list of activities and restaurant recommendations	When user clicks on filter by button, Then user sees the options of filter to sort data how they want
When user chooses the activity of interest Then they see list of options of that activity	When user navigate to about page Then user is presented with informations of the website creators
When user hovers over hamburger nav bar Then users sees drop down menu and able to navigate around the website	When the user reaches the bottom of the page, Then the page loads more results based on search criteria
When user clicks on the desired activity/restaurant Then user is provided with images, title, ratings, price, description and reviews	
When user decided on the activity that they want to do Then user can heart the activity to save the activity to the favorite page	
When user goes to contact page Then user can fill the form to contact our team	
When user scrolls to the footer and click on GitHub button, Then user can see our repository on GitHub	

Process
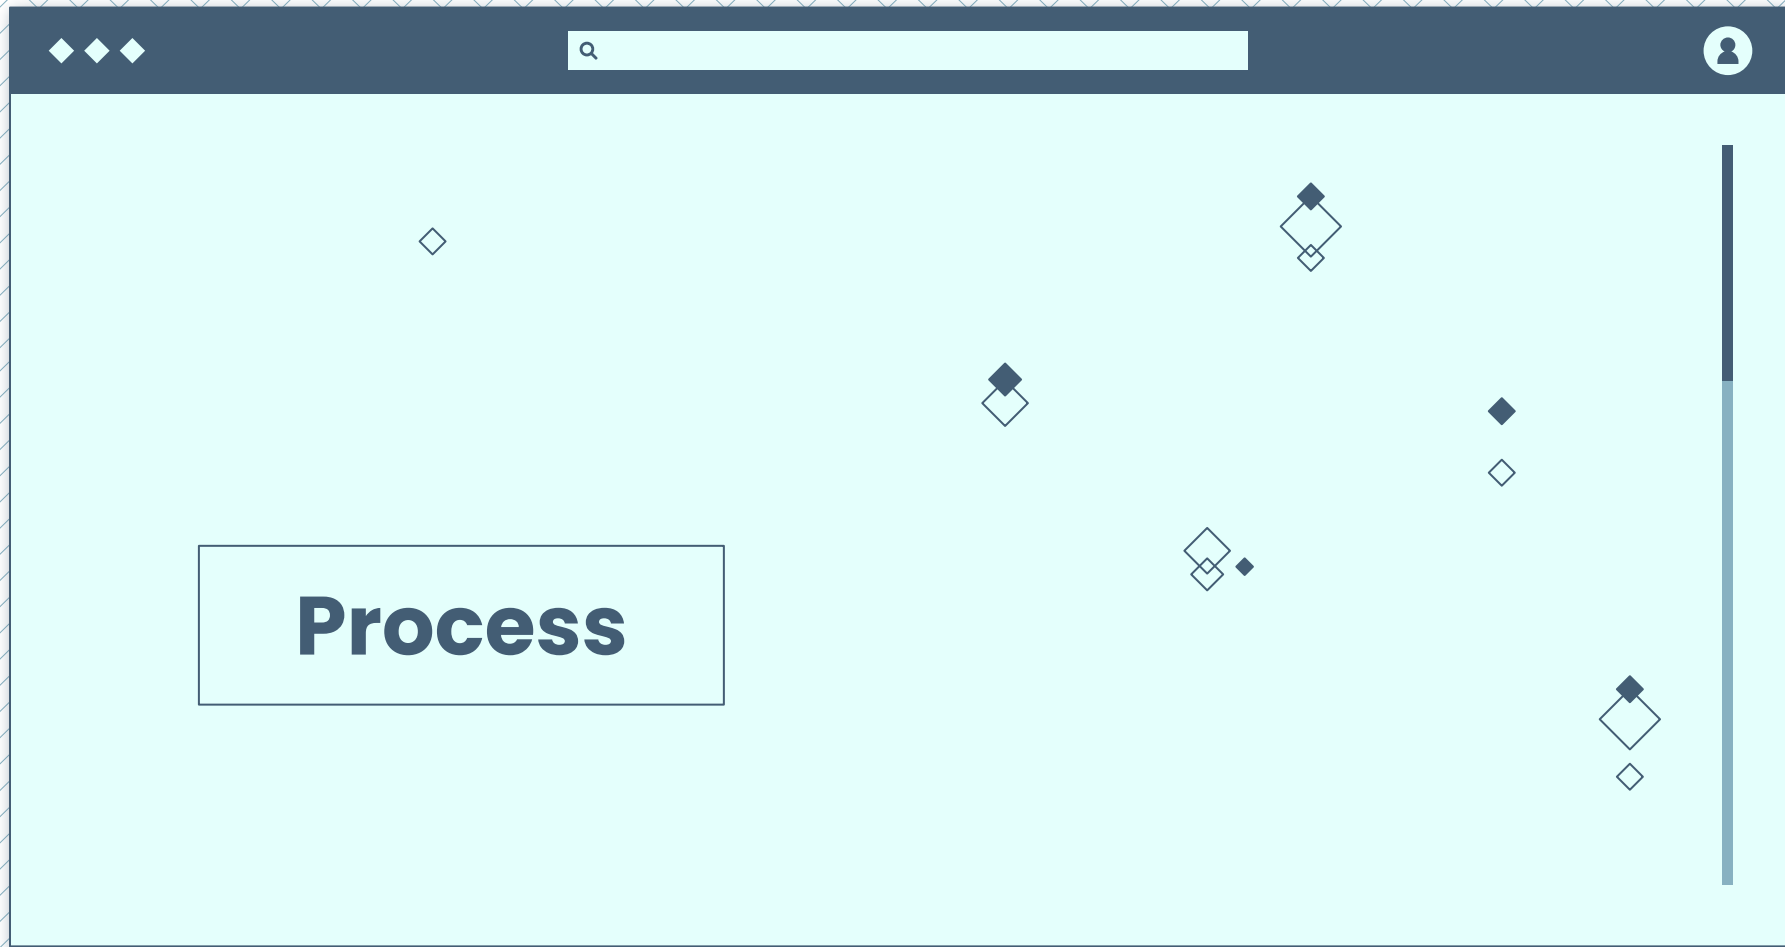

Technologies Used

Yelp API: Access different categories and contents based on user's preferences

Open Weather Map API: Grab location and weather

Google Drive: Brainstorming and Presentation

GitHub: Coding collaboration

BULMA: Frontend framework and styling

Breakdown of Tasks and Roles

- Homepage was done by Tram Le

- Results page was done by Zachary Cygan

- Weather and favorites page was done by Daniel Hernandez

- Search filter and styling done by Mona Lee

- Single detailed view of card done by Shawn Lapuz

Challenges

- Git merge conflicts

- API rate limits

- Time management

- Technical difficulties

Successes

- Responsive design

- Collaborative effort

- Good communication from all members

Directions for Future Development

For future development, we are hoping to be able to get users to create accounts on our application to be able save their favorites to server and also create personal itinerary
